

# ThermiVa for “personal” rejuvenation.

Vaginal Rejuvenation? This is a hard topic for women to discuss. Aging and childbirth cause changes that effect our sexuality, ability to control our bladders, and changes in the appearance of our vulvovaginal area.

Weakened vaginal tissue causes many problems for women. Including; urinary stress incontinence, vaginal dryness, pain during intercourse, and irritation from tight clothing. It's embarrassing. It impacts your relationships. And it can be painful.

If you suffer from any of these issues ThermiVa may be the answer for you.

There are several devices now that are used to treat this area. The top three are Mona Lisa, Diva and ThermiVa. ThermiVa is the only device that uses only radiofrequency to tighten tissue. Both the Mona Lisa and the Diva use laser to resurface the tissue. After months of research and hundreds of phone calls to clinics across the US, we decided to bring ThermiVa into our practice.

The truth is that of the top 3 devices, they all have around a 90% consumer satisfaction rating. That's pretty good in the world of energy devices. We chose ThermiVa for 2 reasons. One, there is no down time. None. No discharge, no pain, you can literally go right on with your normal routine. Two, the results are impressive. Nearly everyone notes improvement after just one treatment (a series of 3 is needed).

In speaking with clinics that had the device, the ONLY negative comment was made by a male physician who said it was “hard on (his) shoulder” to do the treatment. Thankfully, our staff has not had any shoulder problems.

Every clinic we talked to (and there were many) loved the results they saw with ThermiVa. Will it fix everything on everyone? No. None of the devices will. But the improvements the majority of women experience are impressive.

We have 8 females working at our practice. 6 of the 8 have had ThermiVa treatments. We have all been thrilled with the results. I personally, had a problem with urinary urgency. It seemed every half an hour I had to run to the restroom. After just one treatment that changed. By the end of the series I felt like a new person. My confidence was restored. I didn't have to worry about being in the middle of working with someone and having to leave the room.

Every staff member that had the treatment is very excited with their results. Feel free to ask. We will talk to you about our experience.

We have had ThermiVa for over a year now. Our Registered Nurses are very skilled at performing the treatments in a relaxed, private and comfortable environment.
